## **Comments:**

"Beghtol was a scholar of classification theory and one of the top theorists world wide."

"It can be said that she is the leading classification theorist in North America" wrote her colleague, Nancy Williamson.

"Her areas of research and publication include[d] classification theory, the relationship of conceptual

universals to cultural warrant, subject access systems and the relationship of interdisciplinarity to information systems and services.”

When Beghtol retired from the Faculty of Information, University of Toronto in 2009, academics honoured her in a special issue of “Knowledge Organization” 37 (2) 2010. Lynne C. Howarth, a colleague, who authored this festschrift, wrote “Beghtol’s research and theoretical writings have been important in and to the development of the field of knowledge organization, and have exerted a palpable influence, such that Beghtol would appear to align with the definition of “pioneer”.

“Dean Wendy Duff [Faculty of Information, University of Toronto] remembered co-teaching one of her very first classes with Beghtol, who, she said, “discussed the theories of classification with brilliance and clarity. She was the most amazing scholar and a deeply caring human being. One could not have had a better role model.”

In her spare time, Beghtol also wrote poetry. The journal *Atlantis* published two of her poems in 1980: “On the significance of cats”, and “Ice wind”.
