Associations/Committees:

American Library Association

Canadian Library Association

Ontario Library Association

Ex Libris Association. Member of the Library Education Anniversary Committee, 2002.

Decimal Classification Editorial Policy Committee (DCEPC). Canadian appointee member

Honours:

Upon her retirement in 1992 and in honour of her long teaching career, a multimedia, interactive, electronic classroom for teaching, student use, and continuing education was planned and equipped in the Bissell Building, home to the Faculty of Information. In its most recent incarnation, the classroom continues to be one of the most technologically sophisticated classrooms on campus.

Comments:

Professor Cockshutt "devoted her entire teaching career to the Faculty of Library and Information Science at U of T. She was also active in the administration of the School as Administrative Assistant to Dean Bertha Bassam, and from 1984-87, as Associate Dean. She retired at the rank of Emeritus Professor in 1992" [after forty-three years of service].

"Professor Cockshutt was open to using new technologies to help "transition from traditional library services to more technology-oriented services." — former colleague and Dean Emerita Adele Fasick.

Professor Cockshutt was considered an expert both in cataloguing and the theory and application of classification systems. She was recognized internationally for her knowledge of the Dewey Decimal Classification (DDC). Her advisory role on the Dewey Classification Editorial Policy Committee (DCEPC)

helped in the development of editions 18, 19 and 20 of the Dewey Decimal Classification (DDC). In her tribute to Professor Cockshutt, Professor Emerita Lynne Howarth stated "If we were to create a classification number to represent Professor Emerita Cockshutt, it would surely fit somewhere between 'remarkable' and 'truly memorable'."

"The functions of a university professor are traditionally regarded as teaching, research, and publication. Certainly these three activities exist together as a triangle and cannot be separated, for each grows out of and enriches the other two. I have come to realize that teaching is the most important part of the triangle for me. I believe that teaching students is a valid activity in itself, although I recognize that my teaching is enriched by my other academic activities. Teaching allows me to analyse problems, to try to think creatively about their solutions, and to work with students to help them analyse and create and learn for themselves. Always as a teacher I shall have instances where I fail to communicate with another human being, but where I succeed, university teaching becomes vastly rewarding in itself." — Margaret Cockshutt, *Involving Students*, 1974
